

You now have a folder with Leica icons of various camera models, the M7, M6, Digilux and the D-LUX 3 and the Leica Logo.

*Simply copy paste the icon in the top of the INFO window from one to the other.*

To use the Leica Logo as an icon first open the "get info" on the folder, disc or memorycard you are trying to change then select the icon at the top of the dialogue that opens so that it is highlighted.

Then go to the Leica Logo file and copy this file (cmd - C) then go back to the dialogue with the icon you want to change and press (cmd - V).

This should change the icon to the Leica Logo.

Regards
